

Taking **safety** in underground mining into the 21st century

mineglow
Lighting the way

- ENERGY EFFICIENT
- ZERO MAINTENANCE
- 100% WATER PROOF
- SHOCK PROOF
- ENVIRONMENTAL FRIENDLY
- OUTSTANDING SAFETY
- VIRTUALLY INDESTRUCTIBLE
- 5 YEAR WARRANTY
- COMPLETELY MODULAR
- FIRE RETARDANT

EMERGENCY PULSE SYSTEM

Directional pulses of light designed to save lives when it counts most - a breakthrough in safety innovation.

The X-GLO Emergency Pulse System is the unique safety solution that when activated provides consistent directional pulses of lights throughout an entire underground network of tunnels ensuring all occupants are informed instantaneously of an emergency and the direction for seamless evacuation to designated exits or areas of safety in record time.

Operating on high sight impact, and not sound - perfect for machine operators, with excellent visibility in smoke filled or low light conditions, the X-GLO Emergency Pulse System will prevent your workforce from entering into specific dangerous environments, bring order, suppress panic and provide comfort in a stressed and dangerous environment.

The underground Emergency System design is based on extruding high efficiency and quality LED's in a fire retardant transparent PVC, which provides for a energy efficient, IP67, virtually indestructible, environmentally friendly evacuation system, integrates with existing infrastructure and is easily installed in an entire or partial network of underground tunnels with various activation points.

With a full range of solutions, 100m runs per power source, various colours and pulsing sequences, the X-GLO Emergency Pulse System delivers tailored solutions for entire underground networks without any range restrictions.

*The most innovative
and cost effective
emergency system.*
